

Answer: Tera Term for ARM

e) Did you experience any problems with any of the software tools? If so, describe the problem
Answer: No

Things Learnt in Lab 3

Memory allocation error handling.

Compiling with SDCC.

Writing interrupt handler for AT89C51 in C.

ARM function integration.

Designing user Interface with UART.

Toughest Thing to do

Designing a good user interface.

Solving Compilation errors.

Maximum Baud rate of Paulmon : 57600

DSO-X 2022A, MY52160893: Sat Mar 10 10:02:33 2018

Required AT89C51 GUI

```
Monish Nene ESD Spring 2018 Lab 3
Enter the size for buffer 0 and buffer 1 between 32 to 3200 bytes and a multiple of 32:1200
invalid number.
Re-enter number:
Enter the size for buffer 0 and buffer 1 between 32 to 3200 bytes and a multiple of 32:1216
Created Buffer 0 with 1216 bytes
Created Buffer 1 with 1216 bytes
'+ ' Add Buffer, '-' Delete Buffer, '=' Dump Buffer 0, '?' Buffer Query, '@' Reset Code
Enter the size for buffer 2 between 20 to 400 bytes:200
Created Buffer 2 with 200 bytes
Enter the size for buffer 3 between 20 to 400 bytes:300
Created Buffer 3 with 300 bytes
Buffer number = 3
Buffer Start Address = 2649
Buffer End Address = 2949
Allocated Space= 300 bytes
Used Space = 0 bytes
Unused Space = 300 bytes
Buffer number = 2
Buffer Start Address = 2445
Buffer End Address = 2645
Allocated Space= 200 bytes
Used Space = 0 bytes
Unused Space = 200 bytes
Buffer number = 1
Buffer Start Address = 1225
Buffer End Address = 2441
Allocated Space= 1216 bytes
Used Space = 0 bytes
Unused Space = 1216 bytes
Buffer number = 0
Buffer Start Address = 5
Buffer End Address = 1221
Allocated Space= 1216 bytes
Used Space = 0 bytes
Unused Space = 1216 bytes
```

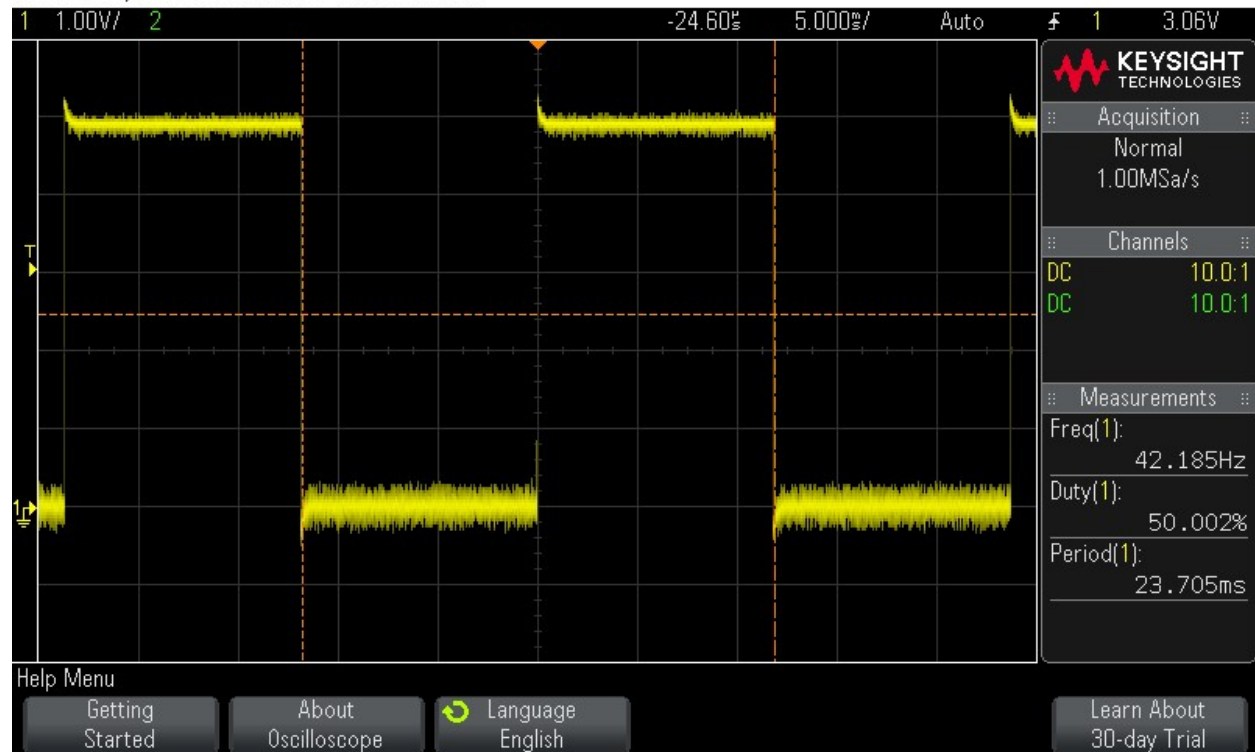

Supplemental AT89C51 GUI

```
COM1 - Tera Term VT
File Edit Setup Control Window Help

Monish Nene ESD Spring 2018 Lab 3 Supplemental
Press 'R' -> run PWM, 'S' -> stop PWM, '+' -> Maximum Frequency, '-' -> Minimum Frequency, 'I' -> Enter Idle Mode, 'P' -> Enter Power
Down Mode, 'W' -> Watchdog Switch, 'L' -> LED toggle, 'H' -> High Speed Toggle
Monish Nene ESD Spring 2018 Lab 3 Supplemental
Press 'R' -> run PWM, 'S' -> stop PWM, '+' -> Maximum Frequency, '-' -> Minimum Frequency, 'I' -> Enter Idle Mode, 'P' -> Enter Power
Down Mode, 'W' -> Watchdog Switch, 'L' -> LED toggle, 'H' -> High Speed Toggle
Watchdog is off.
Watchdog is on.
Is the LED blinking?

Inline Assembly Challenge

```
VT Tera Term - [disconnected] VT
File Edit Setup Control Window Help

param1=100
param2=-7
param3=4
The operation performed is Result = param1*(param2%param3)
Result = 100
Monish Nene ESD Spring 2018 Lab 3
Press 'T' for Temperature, 'P' for Dutycycle, 'C' for challenge operation.
All other characters will be echoed.

param1=100
param2=5
param3=3
The operation performed is Result = param1*(param2%param3)
Result = 200
```

You will need to obtain the signature of your instructor or TA on the following items in order to receive credit for your lab assignment. This assignment is due by **Friday, March 9, 2018 (Part 1 Required Elements)** and **Friday, March 16, 2018 (Part 2 Required and Supplemental Elements)**.

Print your name below, sign the honor code pledge, circle your course number, and then demonstrate your working hardware & firmware in order to obtain the necessary signatures.

Student Name: Monish . H. Nene

Honor Code Pledge: "On my honor, as a University of Colorado student, I have neither given nor received unauthorized assistance on this work. I have clearly acknowledged work that is not my own."

Student Signature: Monish

Signoff Checklist

Part 1 Required Elements

- ☒ Schematic of acceptable quality (all components shown)
- ☒ Pins and signals labeled, decoupling capacitors, and two 28-pin wire wrap sockets present on board
- ☒ Very good knowledge of a terminal emulator
- ☒ Demonstrates all 32KB of XRAM in memory map are functional, including monitor block fill command
- ☒ Using PAULMON2, demonstrates highest baud rate as: 57600
- ☒ Knows how to use SDCC [IDE or make optional]
- ☒ Knows how to analyze output files (.RST, .MEM, .MAP) for correct addresses
- ☒ C serial program and virtual debug port functional and code commented
- ☒ Hex display of buffer contents

TA signature and date

Part 2 Required and Supplemental Elements

- ☒ ARM code integration and execution
- ☒ 8051 PWM control works correctly, X2 mode
- ☒ Correctly enters Idle mode and exits via external interrupt 1
- ☒ Correctly enters Power Down mode
- ☒ All other PCA software menu items function correctly
- ☒ Good understanding of PCA modes
- ☒ Good user interface; program is easy to use

TA signature and date

Instructor/TA Comments: ☐ ☐ ☐

FOR INSTRUCTOR USE ONLY

Part 1 Elements

Schematics, SPLD code
Hardware physical implementation
Part 1 Required Elements functionality
Sign-off done without excessive retries
Student understanding and skills
Overall Demo Quality (Part 1 elements)

Not Applicable	Below Expectation	Meets Requirements	Exceeds Requirements	Outstanding
